

# Linked Data Workshop

Ghent

28/29 March 2012

## ■ Introduction

- IRUSE (Built Environment)
- DERI (Semantic Web/Linked Data)

## ■ Cross-domain Data for Building Management

- Enhanced Decision Support with Scenario Modelling
- Challenges

## ■ Linked Building Data

- DERI Building Use Case

# Who are IRUSE?

Based at National University of Ireland, Galway

Research Group of Civil/Mechanical Engineers

5 post-docs & 7 PhDs

Leagan Gaeilge Text Version Display: Zoom (-) (+) View (Normal High contrast) Printer Friendly A to Z Sitemap

**INFORMATICS RESEARCH UNIT FOR SUSTAINABLE ENGINEERING**

IRUSE is committed to realising the goal of energy efficient buildings through a combination of:

- Simulation (both whole building and reduced order modelling);
- Building Information Modelling (IFC BIM);
- Systems integration and optimisation;
- Improved instrumentation in buildings;
- Stakeholder-driven visualisation of performance data.

We aim to accomplish this through a wide range of collaborations with industry and academic institutions.

# IRUSE interested in Building Optimisation during Operational Phase

HVAC systems integration and Optimisation

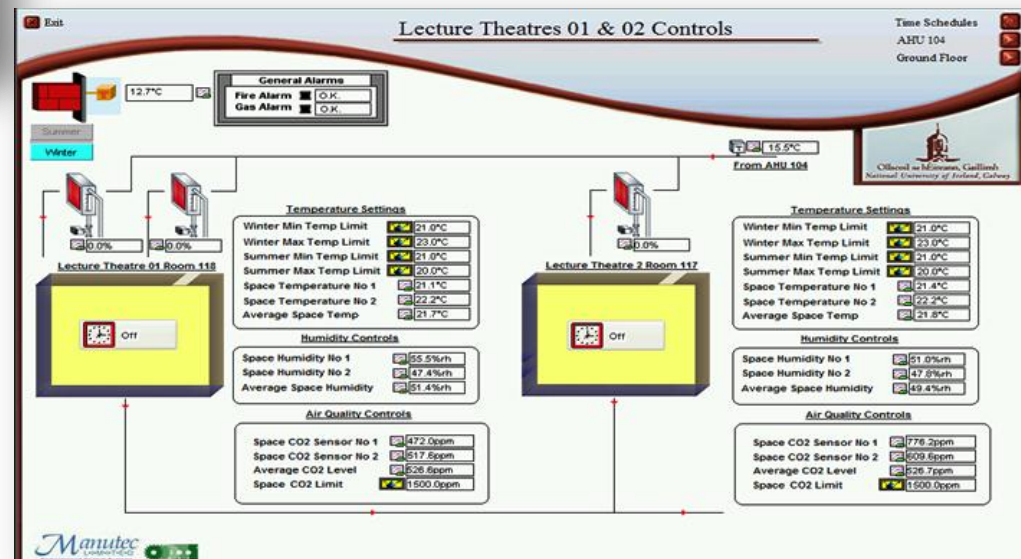

Information driven building operation

Stakeholders specific performance data

Energy Simulation

Building Information Models

Calibration of simulation models

- **Founded June 2003 as a CSET (Centre for Science, Engineering and Technology).**

- Link scientists and engineers / academia and industry
- Fundamental research
- Development of Irish-based technology companies
- Attract industry
- Education & outreach

- **DERI Institute**

- CSET
- Commercialization, DAI
- EU, EI, direct industry, IRCSET

- **DERI strategic plan responds to priorities**

- Local: University focus on Informatics, Physical & Computational Sciences
- National: SMART Economy, Program for Government
- International: EU Digital Agenda

- **Number one in its core space**

- Research Publications > 950
- Participate in 17 standardisation groups (W3C, OASIS)
- Approx 140 members from 30 nations
- 57 PhD's /Masters
- 42 completed PhDs/Masters

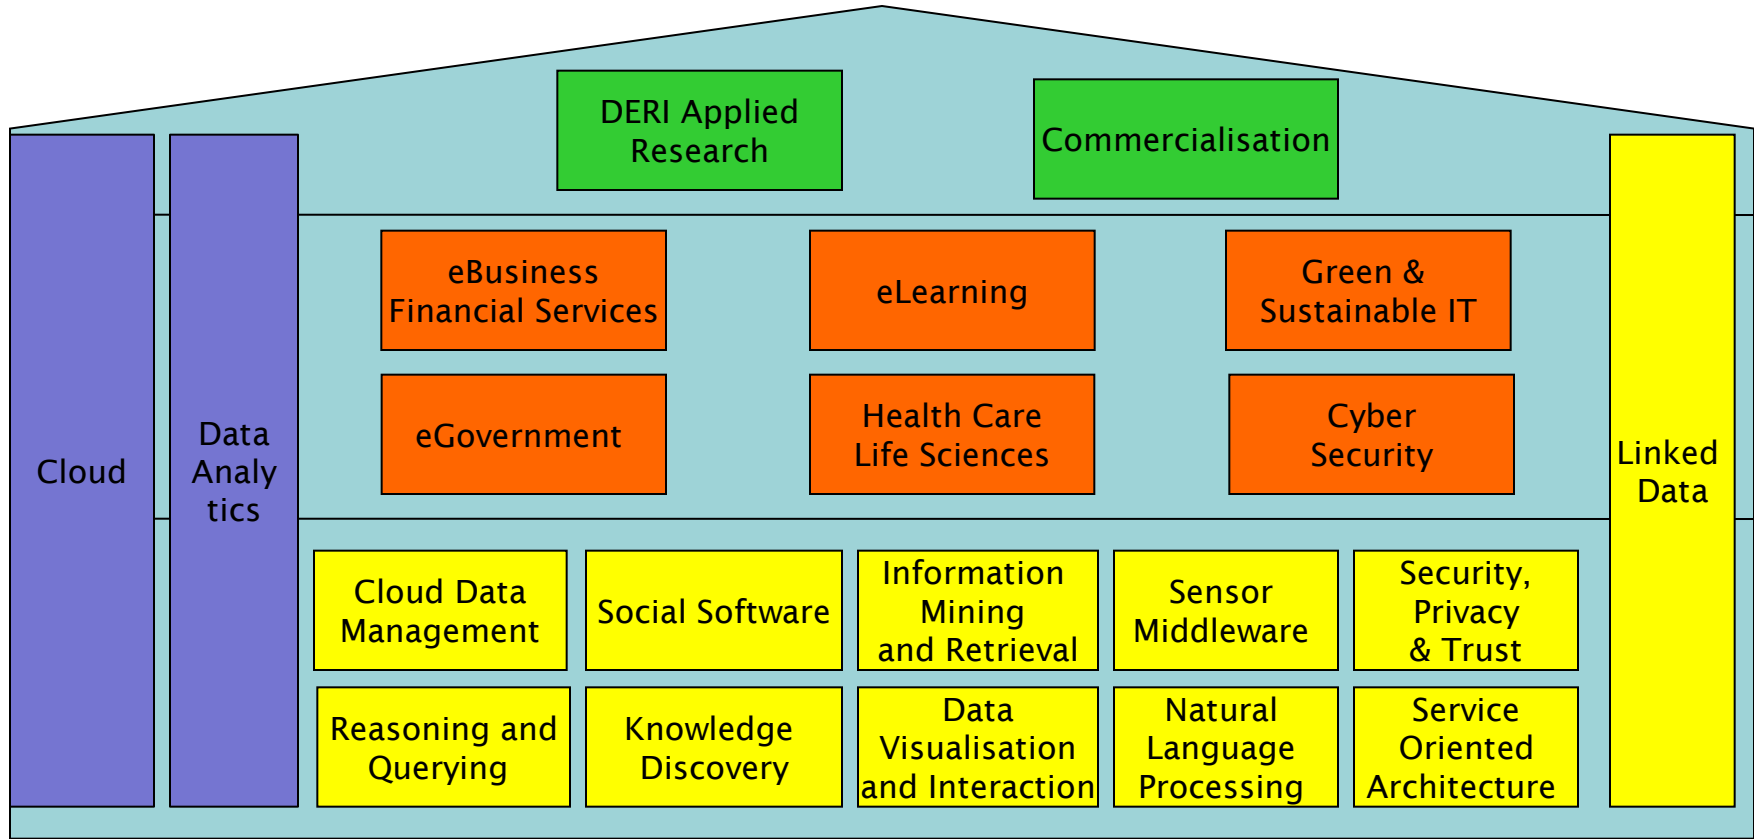

- **Core Industrial Partners:**

- MNC's: Cisco, Avaya, Bel-Labs, Ericsson...
- SME's: Storm, Celtrak, OpenLink.....
- Research: FBK

- **Total Research Grants: >€60 million**

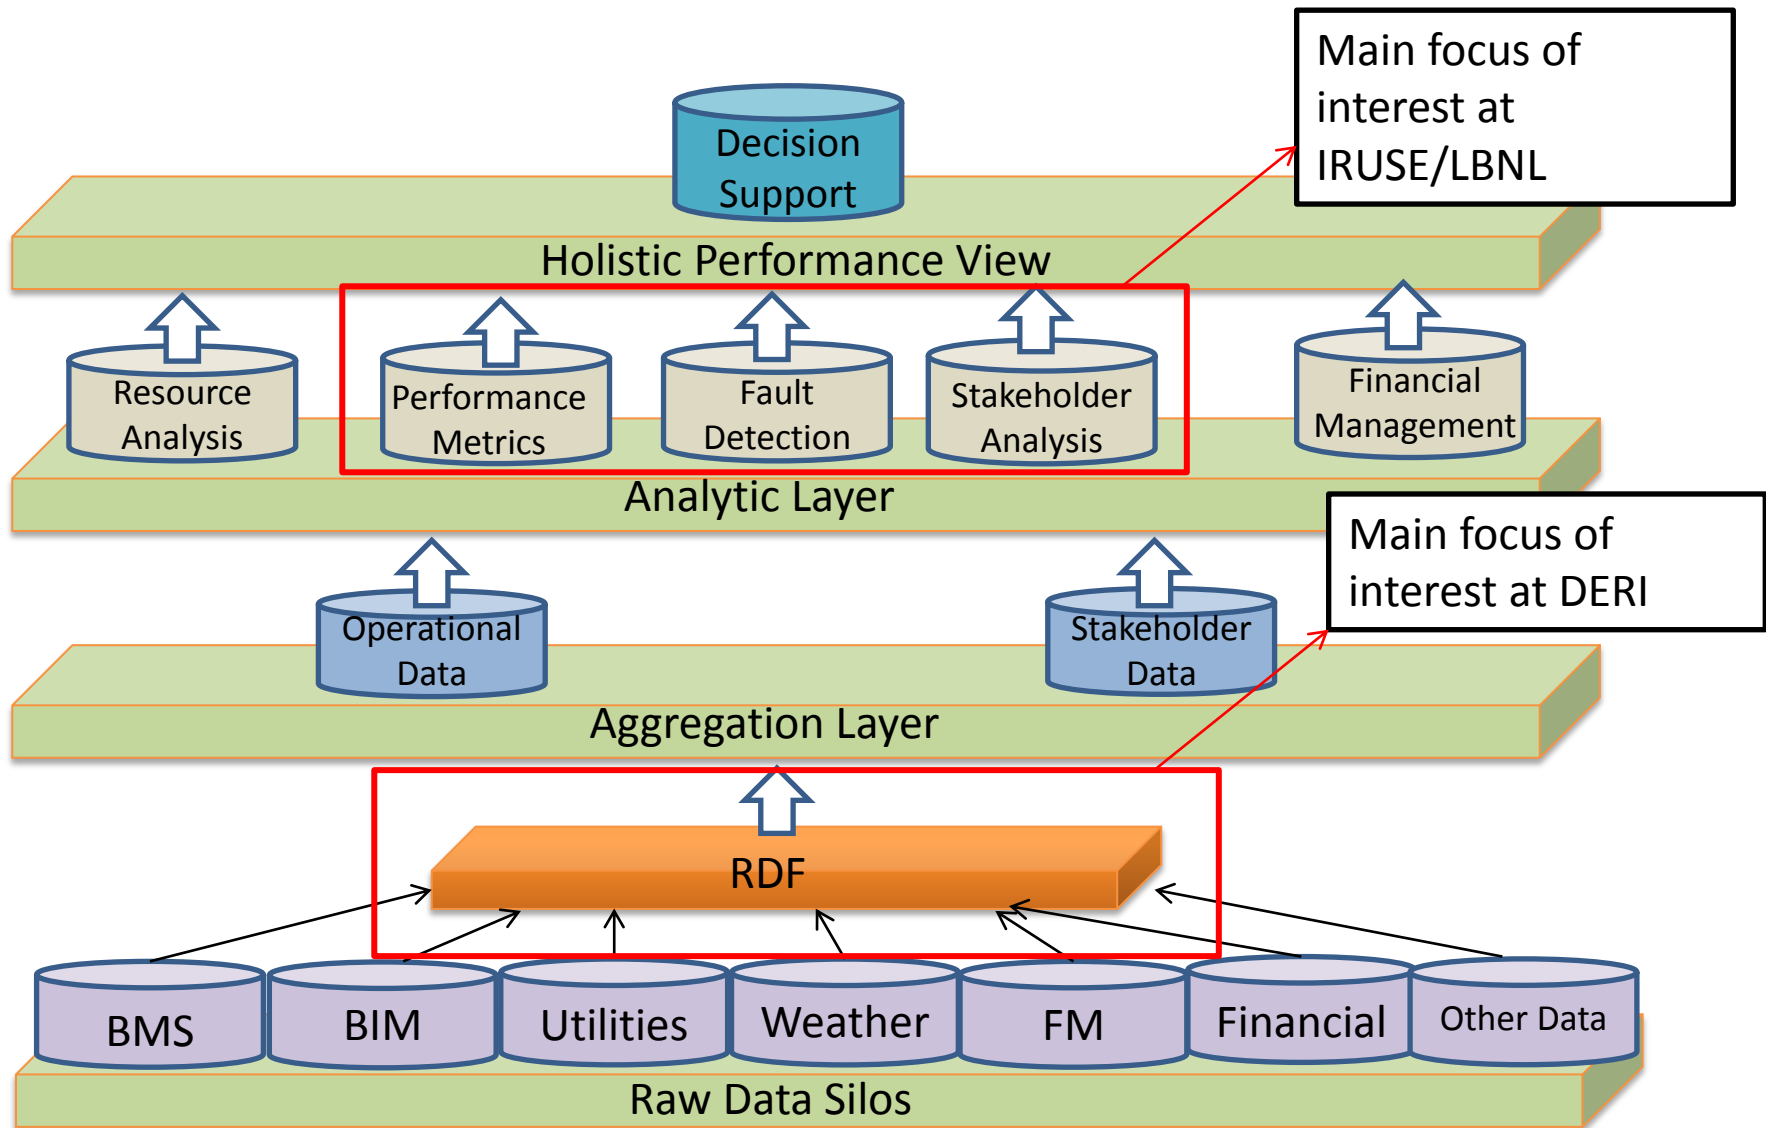

- SFI, EU Framework, Enterprise Ireland, Industry

**DERI is designed to provide an integrated solution**

# IRUSE, LBNL, and DERI have Complementary Research Interests

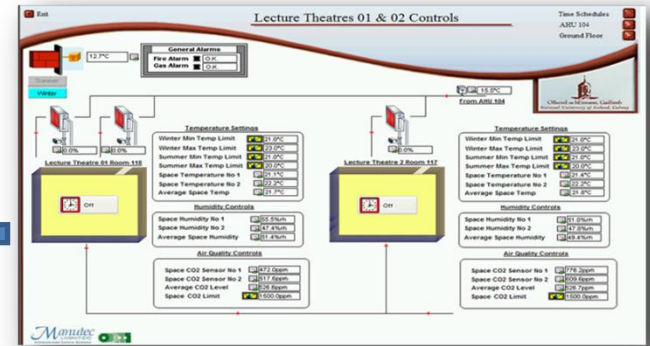

# Organisations incur substantial costs as a result of data mismanagement

Confusion  
 No Interoperability  
 Cost Overruns  
 Higher Costs  
 Inefficiencies

**Customer Supply**

YOUR account number is **90X-XXXX-XXXX**

Date of issue: 10 Nov 2007

Invoice number: 123455490

**Useful contacts**  
 For Account/General enquiries  
 Contact ESB Customer Supply  
**1850 372 372**  
 Lines open 8am-8pm, Mon-Fri  
 Please leave your details. We'll call you back.

For Disputes/Complaints/Service  
 Contact ESB Helpline  
**1850 372 999**  
 Lines open 9am, 7 days a week  
 Please leave your details. We'll call you back.

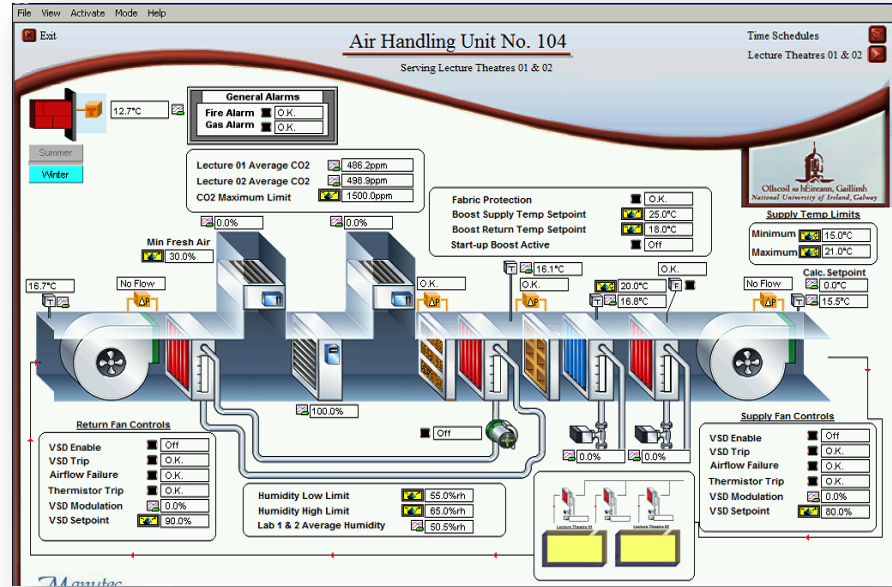

Your MPRN number is **M 10 000 000 001**

**Your electricity bill**

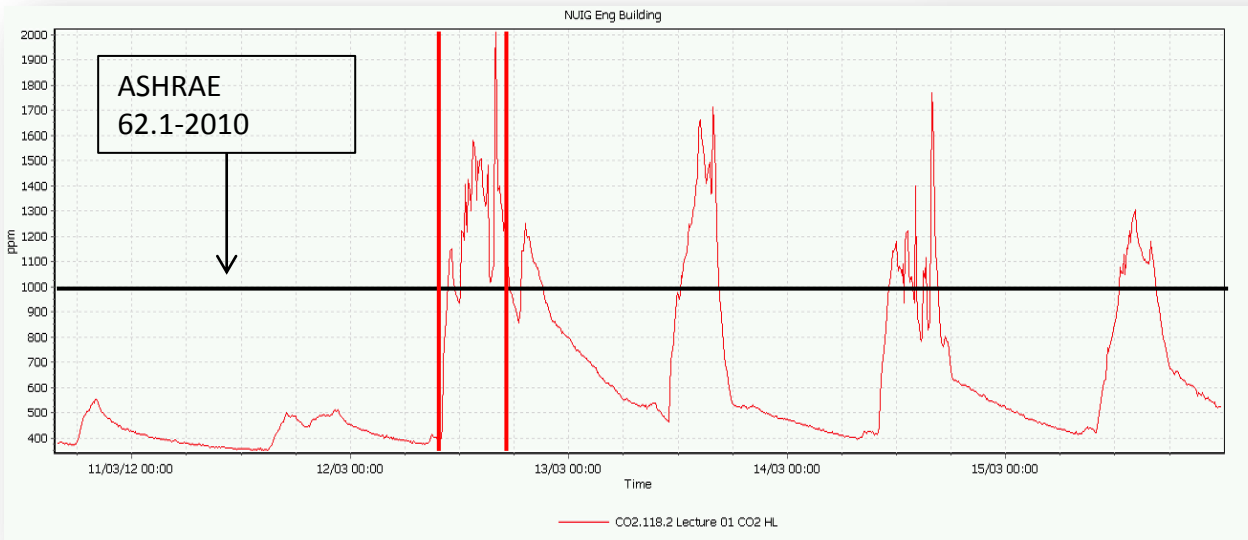

Meter readings	Units and rates (cent)	Description of charges	Amount @ CR = Credit
Present	Previous		
<b>TARIFF: DOMESTIC</b>			
46124	63605	948 x €0.1495	140.61
		164 x €0.1324	21.71
55 DAYS @	€0.3200/day	STANDING CHARGES	16.64
4 DAYS @	€0.3150/day	STANDING CHARGES	5.69
PUBLIC SERVICE OBLIGATION LEVY SEPT. OCT			0
VAT @ 13.5 % ON 176.98			25.89

**Did you know?**  
 By having your account number to hand when you contact us we can ease your query quickly and efficiently.  
 Meter reader call on you from 11am-4pm.  
 When your meter is

# Research Motivation - a concrete example

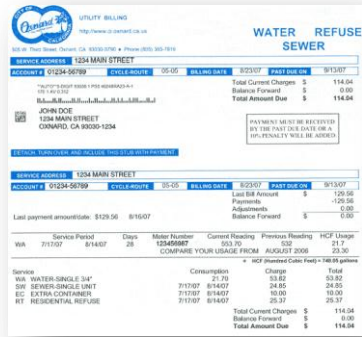

CO2 levels

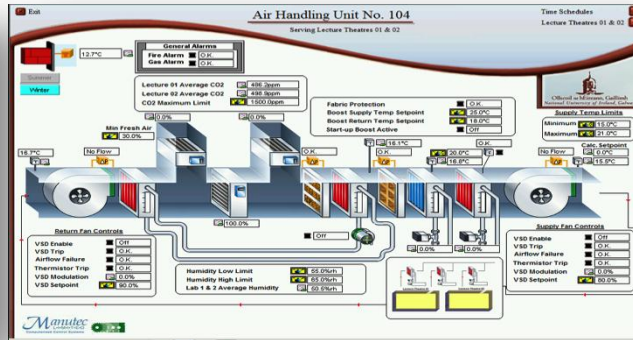

Time	Monday	Tuesday	Wednesday	Thursday	Friday
08:00-09:00					
09:00-10:00	237		237	200	237
10:00-11:00		237	237	237	200
11:00-12:00	237	180	180	145	237
12:00-13:00	237	200	237	200	149
13:00-14:00			145		
14:00-15:00	221	237	145		140
15:00-16:00	221		120	160	140
16:00-17:00	149		250	160	
17:00-18:00	200			160	

# These are the types of data that we wish to leverage

Utility Bills

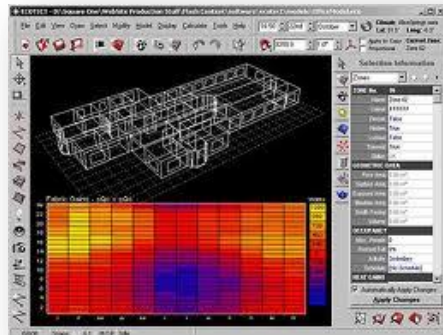

BMS

Sensor & Meter Data

Weather Data

Simulation Models Output

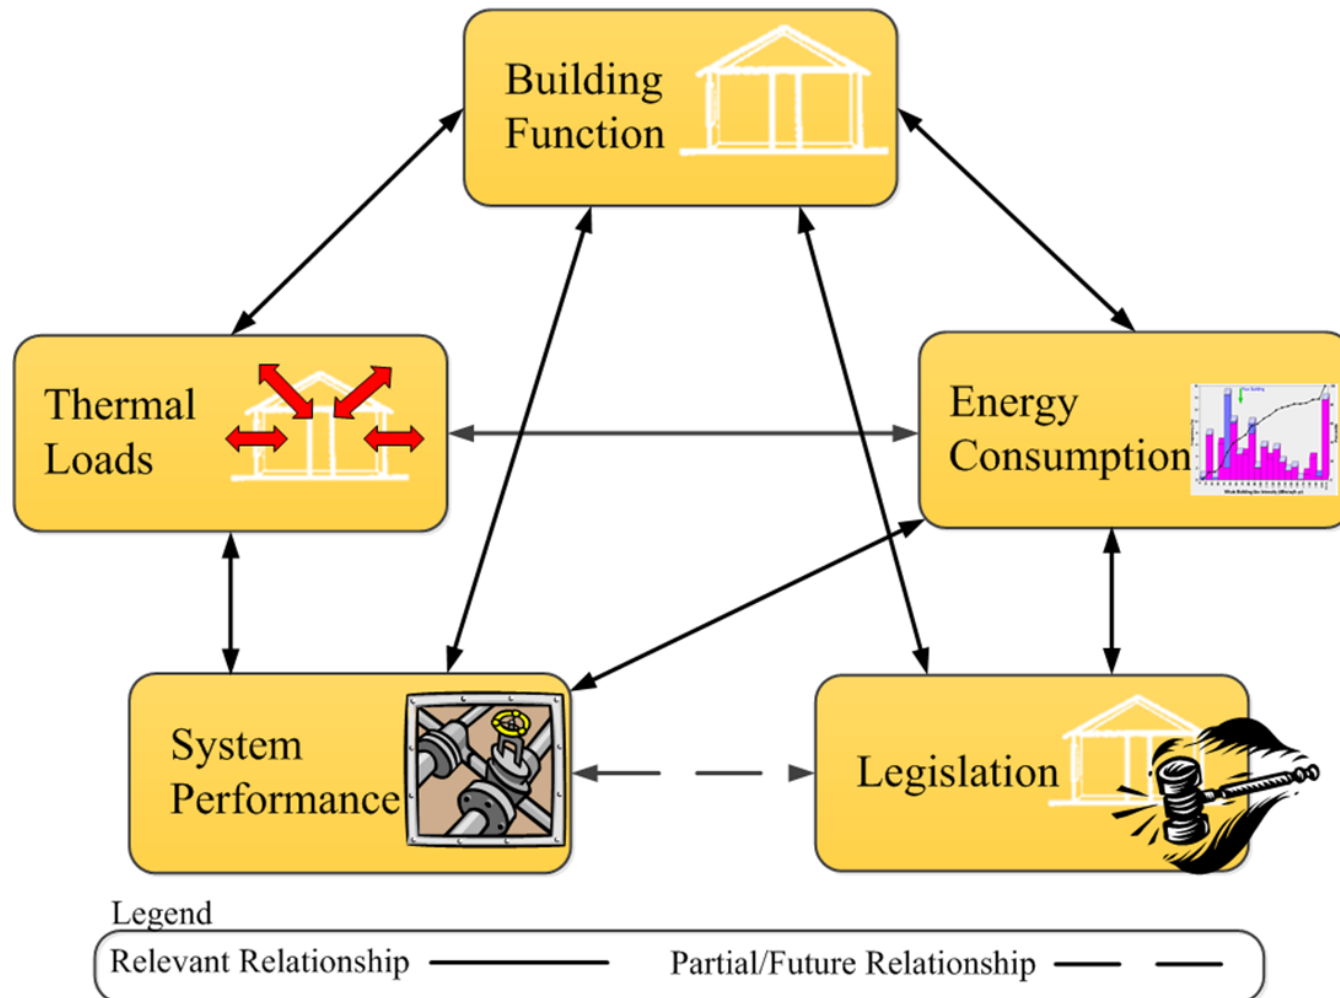

Building Models

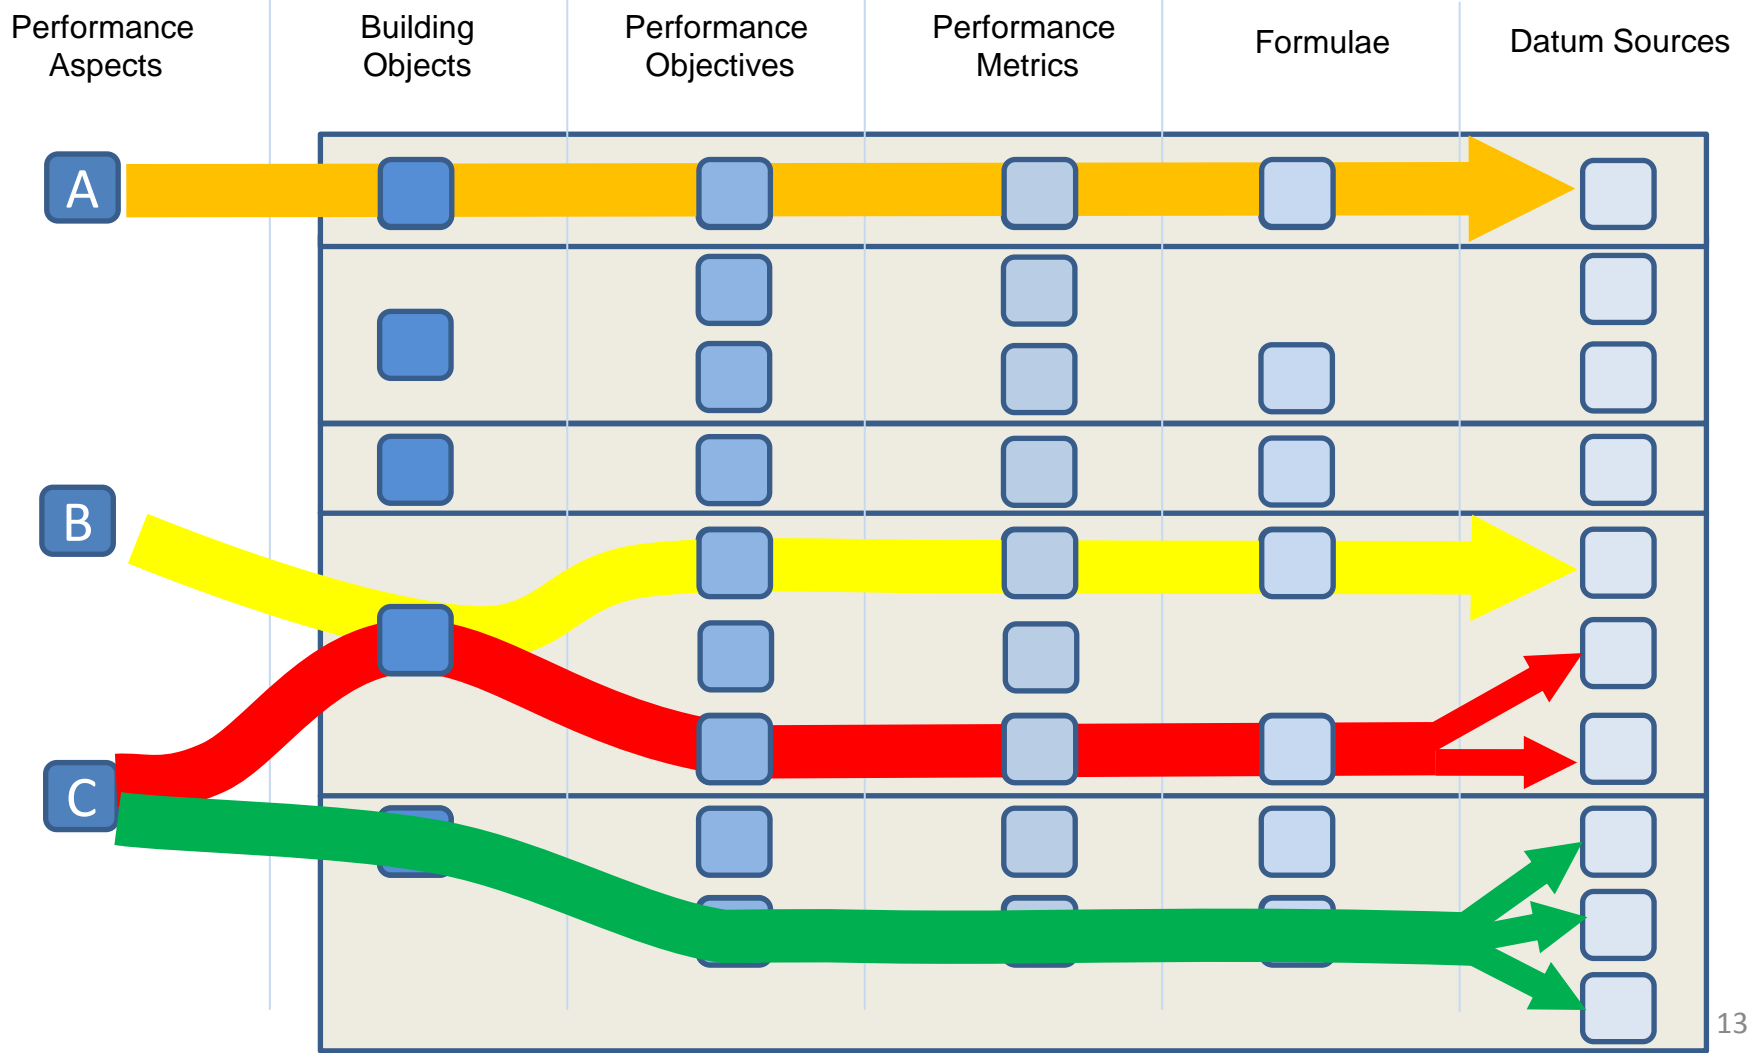

Other Data

# Scenario Modelling provides a holistic interpretation of building performance

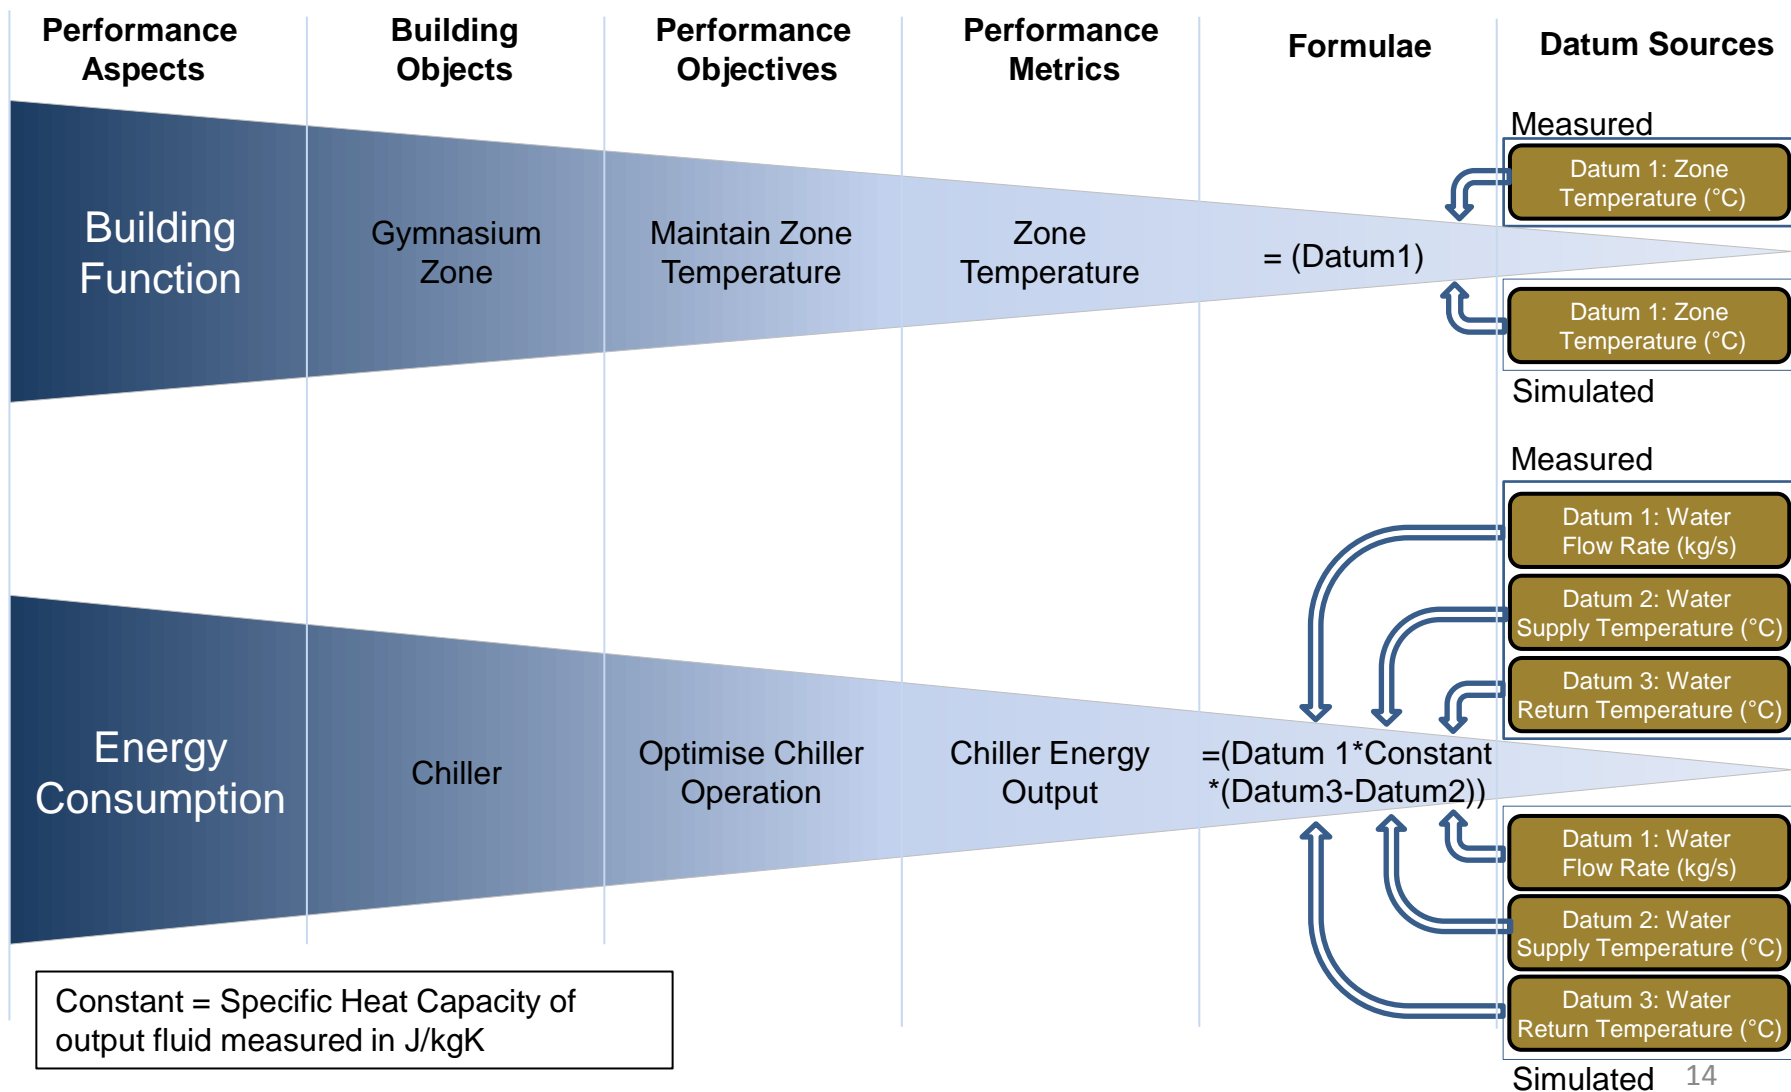

# Define information required by stakeholder and related data

## Scenario Description

# A building manager would like to analyse comfort and energy consumption

## Scenario: Compare Comfort & Energy Consumption

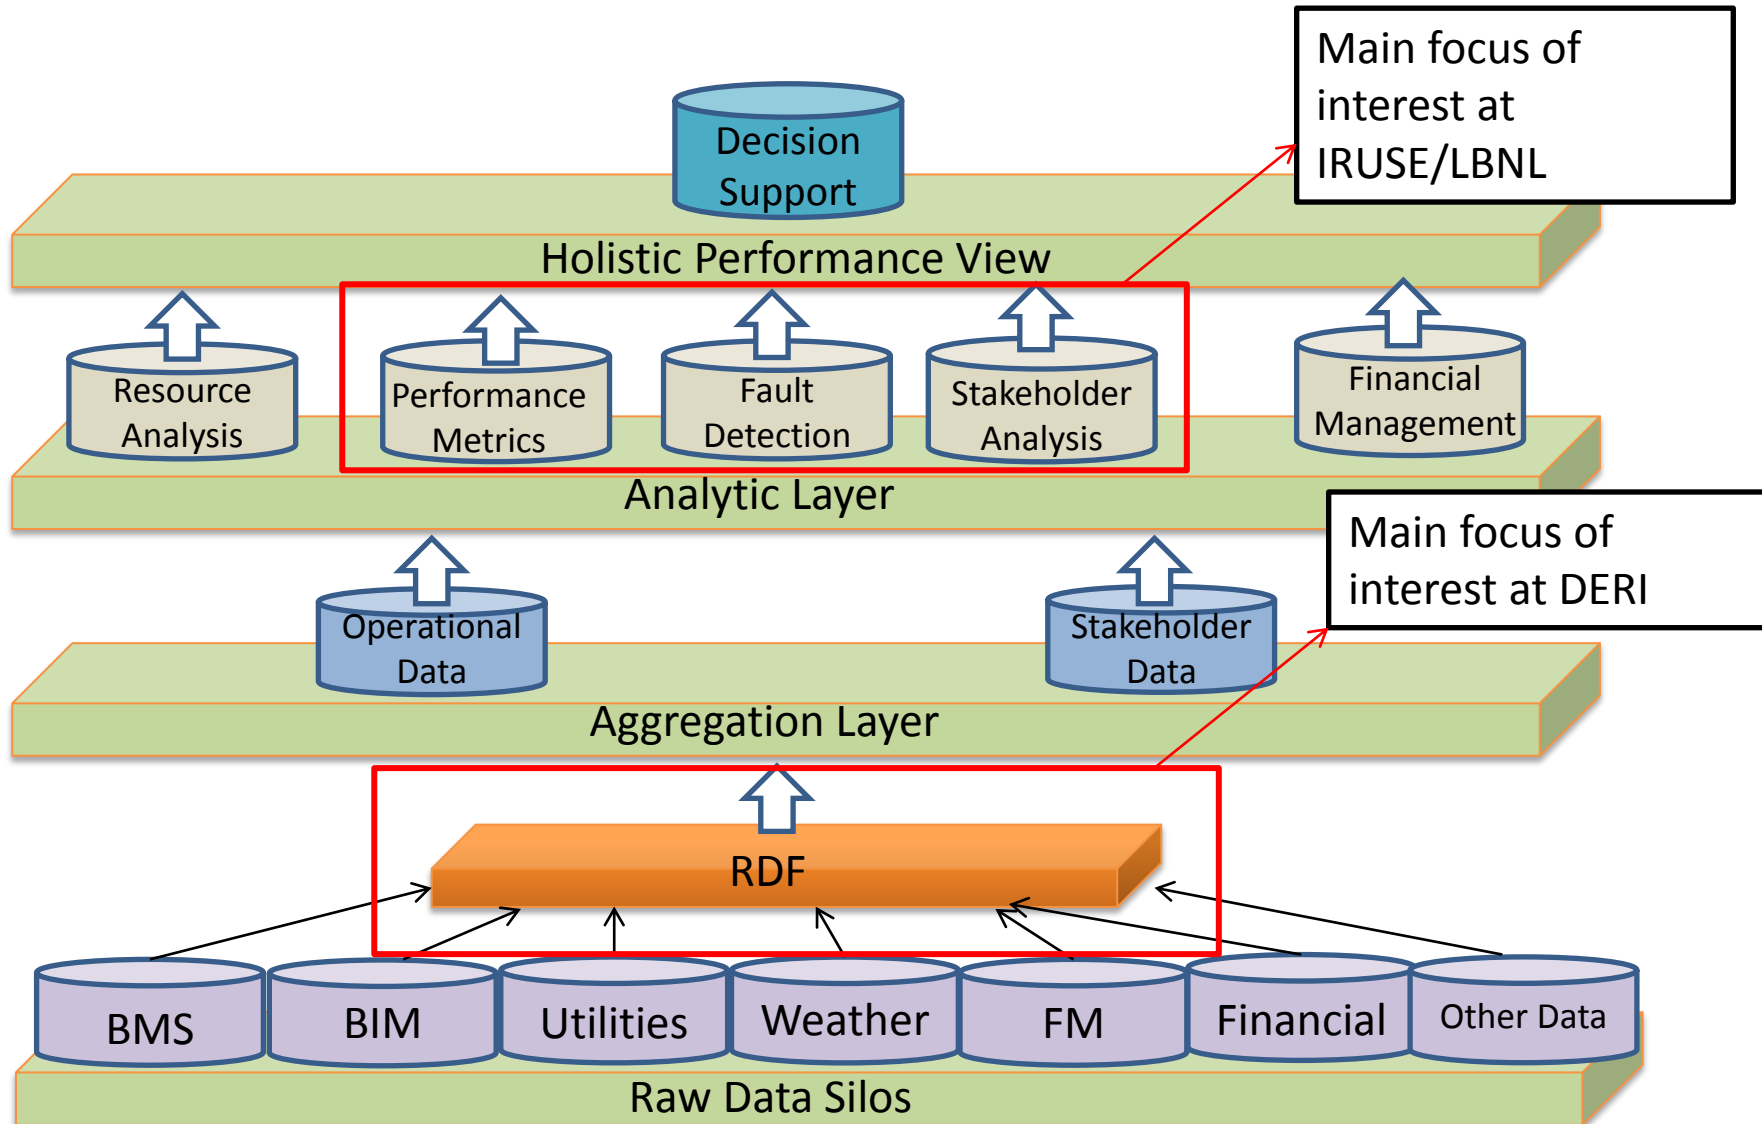

- **Initially developed a Performance Framework Tool**
  - IFC based
  - Encountered significant roadblocks with BIM
  - Originally felt BIM was central pillar of performance assessment
  - Recognise BIM is one of many pillars
  
- **Technology and Data Interoperability**
  - Data scattered among different information systems
  - Multiple incompatible technologies make it difficult to use
  - Dynamic data, sensors, ERP, BMS, assets databases, ...

- **Linking building data builds context between systems**
  - Relevant information can be linked together to build holistic views of the building
  - Broader context can be used in decision making
- **Maintains loose coupling between systems**
  - Allows domain systems to focus on their expertise
  - Allows systems to develop independently

# IRUSE, LBNL, and DERI have Complementary Research Interests

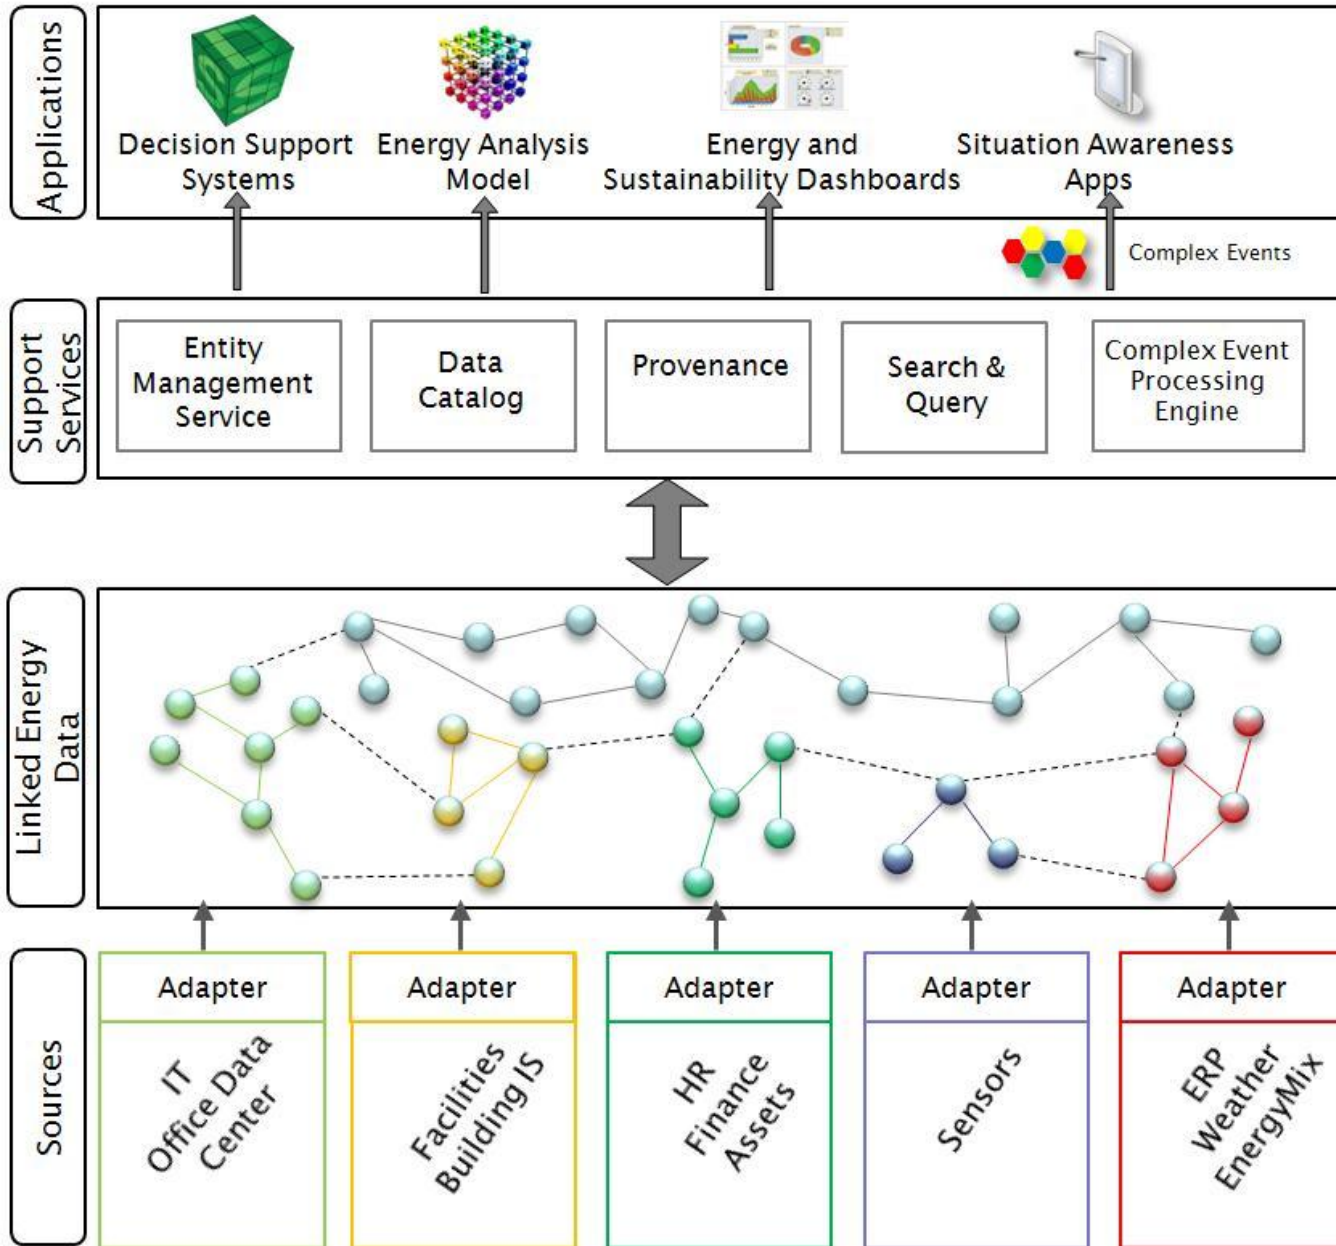

## ■ DERI Building

- ❑ No BMS or BEMS
- ❑ 160 person Office space
- ❑ Café
- ❑ Data centre
- ❑ 3 Kitchens
- ❑ 80 person Conference room
- ❑ 4 Meeting rooms
- ❑ Computing museum
- ❑ Sensor Lab

# DERI Dataspace

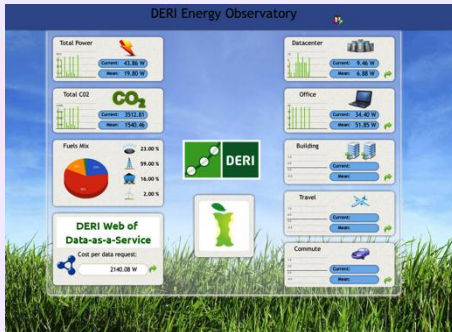

## Energy Usage Tracking

1. Data from Enterprise Linked Data Cloud
2. Sensor Data
3. Building Energy Situation Awareness

## Enterprise Energy Observatory

Organisation

Business Process

Personal

## Open Energy Intelligence Platform

(Linked Data, Semantic Web, Semantic Sensor Networks)

## Edward Curry

Name	Edward Curry
Unit	DGSIT
Desk	225
E-mail	ed.curry@deri.org

## ■ Buildings and Rooms

- Simple vocabulary for describing the rooms in a building
- <http://vocab.deri.ie/rooms>

## ■ Queries

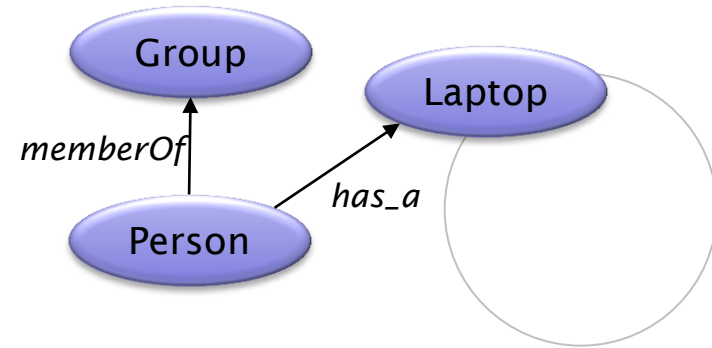

- How many floors are in the Building?
- How many desk on are the first floor?
- Who is the occupant of room 202e?
- Where does Edward Curry sit?

## ■ People, Groups and Devices

- FOAF: Simple vocabulary for describing peoples and groups.
- DERI Energy: Devices and Laptops

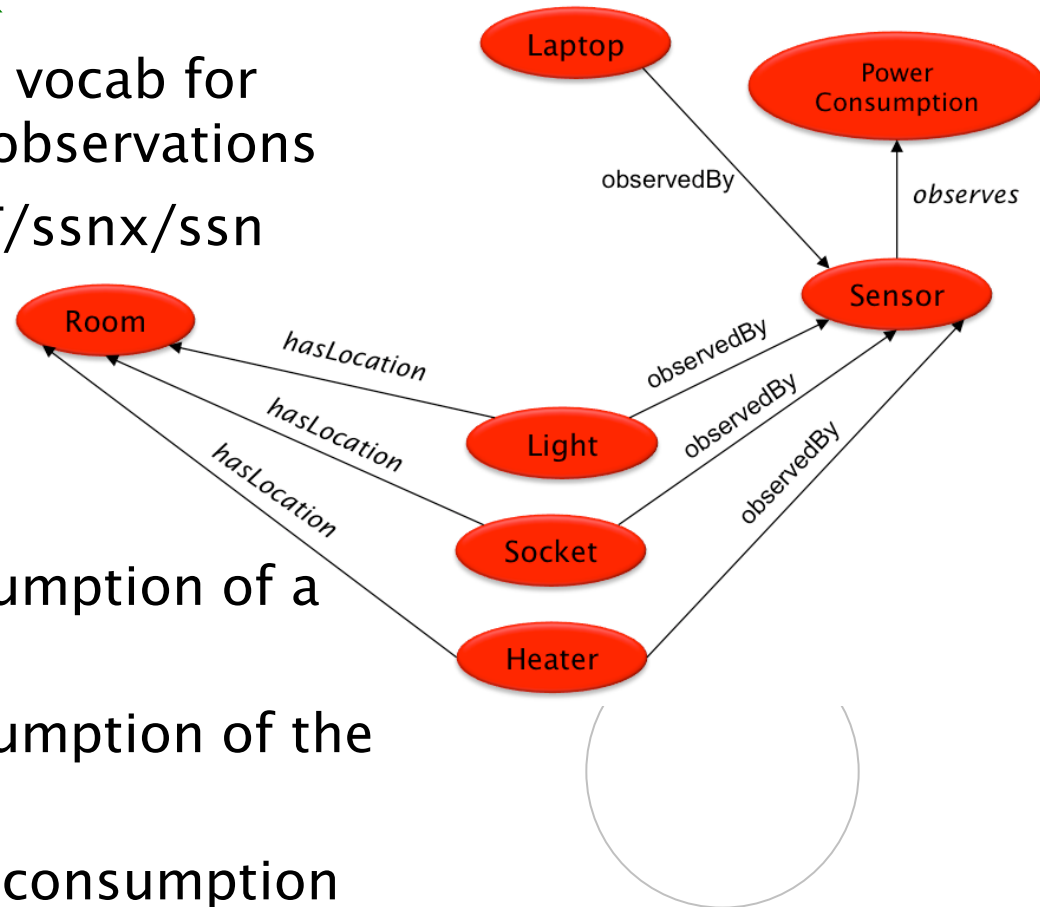

## ■ Queries

- Who are the members of the Green IT group?
- What laptop does Edward have?
- What laptops are used by the Green IT group??
- Who is using a MacBook Pro?

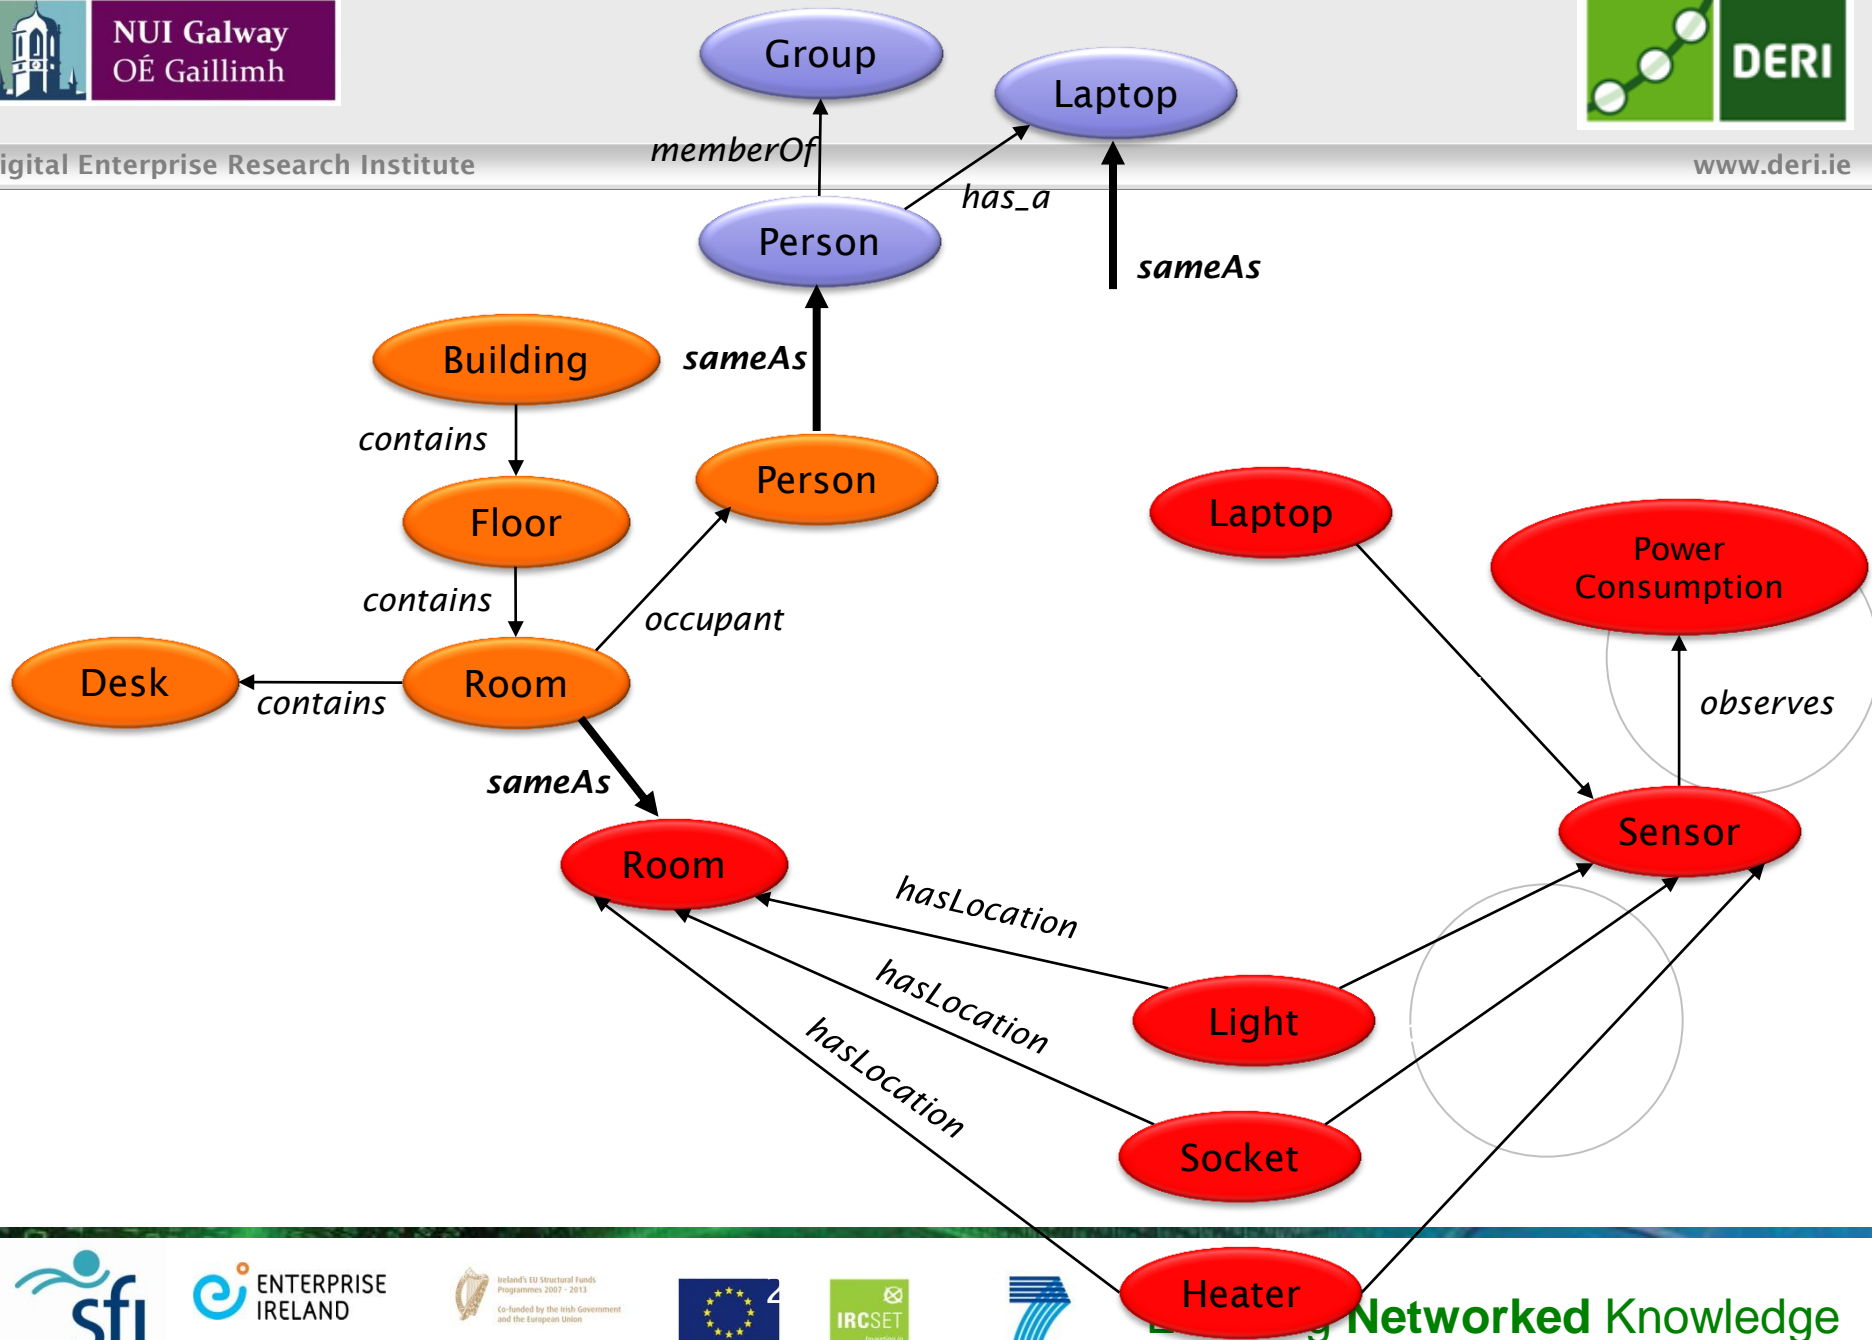

## Energy Sensor Network

- Semantic Sensor Network vocab for describing sensors and observations
- <http://purl.oclc.org/NET/ssnx/ssn>

## Queries

- What is the energy consumption of a laptop?
- What is the energy consumption of the lights in room 202e?
- What is the total energy consumption of room 202e?

## Queries over merged graph

- What is the total energy consumption of rooms on the first floor?
- What is Edward's total energy consumption? (laptop, lights, heats, etc)
- What is the energy consumption of the laptops for the Green IT group?
- What is the total consumption of members of the green IT units on the first floor?
